INLINE OFFSET CUTTING

Since its introduction to the U.S. market in 2006, the IOC Inline Offset Cutting system has revolutionized the offset printing industry. You can now print, die-cut, perforate, or crease in one pass on your offset press. Simply exchange the rubber blanket with the flexible IOC die, complete with clamping bars and you are ready to run!

KBA North America Inc.

"The IOC system worked flawlessly allowing KBA to show the many individuals attending our open house how the IOC system can eliminate separate die cutting operations while producing top quality die cutting. We were completely satisfied with this outstanding new technology and recommend it to all KBA customers and other press operator wanting to reduce turn around times while producing outstanding die cutting results."

Chris Travis (Director of technology at KBA)

We are Die cutting on press as I type. It works fantastic to say the least. This job normally would take us 50+ hrs on our cylinder press. Now I estimate we should be done in 5 hrs.

Nathaniel G. Allen (Production Coordinator/Principal)

Inline, on press finishing system specific to your press. Allow quality perforating, die-cutting and creasing at normal press speeds

Increase Printing Machine Efficiency

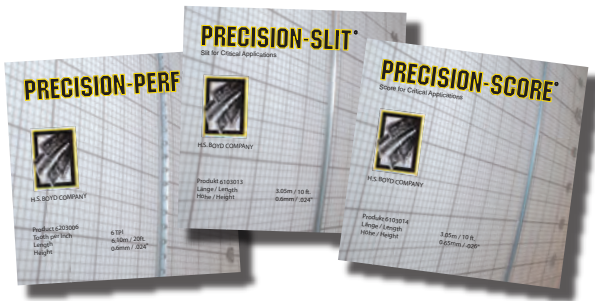

Introduced to the U.S. market in the year 2000, H.S. Boyd's PPP (Perf-Print-Plus) system has changed the offset press from a one dimensional machine to a multiple functional finishing station. The PPP system converts a printing unit easily into an inline finishing unit. It allows perforating, die-cutting and scoring as well as partial ink or coat transfer, at full press speed with superior quality.

"While visiting a trade show, I learned about H.S. Boyd and their Perf Print Plus® (PPP) System."
Said Guy Liskey with Liskey & Sons Printing.
" The installation worked great, just as we expected, Boyd's technical support was exceptional and the job was off the press in no time."

Precision Perf/Score/Slit

The Precision Rules® line of products are designed for critical kiss cutting and creasing applications. Precision Rules® work in conjunction with all on press converting systems and are available in two heights, 0.6mm (.024") and 0.9mm (.035"). Precision Rules® maintain a tolerance of ± .0002 providing an exact cut, perf or crease every time. Precision Rules® are designed and manufactured to the same standards as all H.S. Boyd products and are diamond sharpened and heat treated to insure maximum durability.
